1. Battery must be substantially depleted; charging rate slows as charging progresses. All battery life claims are approximate and based on the median user tested across a mixed use profile (which includes both usage and standby time) under optimal network conditions. Actual battery performance will vary and depends on many factors including signal strength, network and device settings, temperature, battery condition, and usage patterns. 2. Auto mode has a minimum device refresh rate of 60Hz and a maximum refresh rate of 90Hz; actual refresh rate may be less and will vary based on app/content limitations and requirements, device mode settings, and other factors. 3. The 50MP sensor combines 4 pixels into 1, for an effective photo resolution of 12.5MP. 4. Auto smile capture can recognize up to 5 faces/people in the same frame. 5. RAM Boost extended RAM requires use of phone's internal storage as virtual memory, decreasing storage capacity; available user storage is less while in use; feature on by default unless turned off. 6. Water-repellent design creates a barrier to help protect against moderate exposure to water such as accidental spills, splashes or light rain. Not designed to be submersed in water, or exposed to pressurized water, or other liquids; may diminish over time. Not waterproof.
